ABHISHEK M G

MCA STUDENT | STUDENT RESEARCHER

Bengaluru, Karnataka | abhishekmgabhishekmg726@gmail.com

GitHub: github.com/abhi-abhi86 | LinkedIn: linkedin.com/in/abhishekmg76

PROFESSIONAL PROFILE

Research-oriented MCA student and BCA graduate with hands-on project work in Python, machine learning, computer vision, and information retrieval. Interested in building practical, privacy-conscious tools and investigating how AI methods can support real-world problems. Public GitHub work includes a multi-species image-based disease-detection application, data-analysis and ML experiments, desktop utilities, and cybersecurity tooling. Project work spans image validation, model training and evaluation, confidence-based predictions, research retrieval, and desktop interfaces. Brings a foundation in software development, clear technical documentation, and version-controlled collaboration.

EDUCATION

Master of Computer Applications (MCA) | Acharya Institute of Technology, Bengaluru
Currently pursuing

Bachelor of Computer Applications (BCA) | Kuvempu University
Completed

SELECTED RESEARCH & DEVELOPMENT PROJECTS

Multi-Species Disease Detection and Management System | **Python, PyTorch, PySide6, computer vision**
• Desktop application for exploring image-based disease analysis across plant, human, and animal use cases. The repository documents a MobileNetV2 model, custom training, confidence scoring, image validation, and offline-first operation. It also describes disease-information search, Wikipedia and PubMed research integration, and PDF/HTML report generation. The project brings together computer vision, model experimentation, retrieval, and user-facing reporting in one workflow.

Data Analysis & Machine-Learning Experiments | **Pandas, scikit-learn, PyTorch**
• GitHub profile describes scripts and notebooks for data cleaning, model training, and evaluation using Pandas, scikit-learn, and PyTorch. This work supports iterative experimentation, comparison of model behavior, and structured presentation of results.

Spiffy Cybersecurity Framework | **Python, C++, optional Rust**
• Security-tooling project whose repository describes defensive modules for MITM detection, SSL/TLS auditing, packet analysis, and Bluetooth security, alongside encrypted storage and peer-to-peer messaging. The project also documents modular tooling and automation. Relevant interests include network security, defensive monitoring, and responsible security research.

GUI & Productivity Utilities | **PyQt6, Pillow, Django**
• Public profile describes desktop utilities for image processing and report generation, developed with PyQt6 and Pillow, as well as a Django portfolio website for presenting projects and contact information. These projects complement the ML work with interface design and practical software delivery.

TECHNICAL SKILLS

Programming: Python, Rust
Machine learning & data: PyTorch, scikit-learn, NumPy, Pandas, Matplotlib, Transformers
NLP & retrieval: Hugging Face, BM25 / Rank-BM25, fuzzy matching
Computer vision & interfaces: OpenCV, PySide6, PyQt6, Pillow
Web & development: Django, Git, documentation, model experimentation

RESEARCH INTERESTS

Applied machine learning; computer vision; AI-supported health and agriculture tools; NLP and information retrieval; privacy-conscious/offline AI; defensive cybersecurity.
